DETAILED ACTION

1. Response to Election/Restriction filed 3/3/06 has been entered and as such claims 1-4, 8-14, 18-19, representing Group I, Species I, are elected. Given the allowability of generic claim 1, claims 5-7 will be rejoined.

Drawings

2. The drawings are objected to because the instruction schedulers 432 of figure 3 are not clearly represented. It is not clearly defined how the connections referred to in the figure represent instruction schedulers. Applicant is advised to either add representations of instruction schedulers or to revise the specification to indicate that the instruction schedulers are linked to clusters 430 through lines 432-1 to 432-N. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The disclosure is objected to because of the following informalities: there is no Brief Summary of the Invention.

Appropriate correction is required.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 11-14, 18-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims are directed towards an article of manufacture including a machine readable medium having instructions stored thereon; however, the machine readable medium, defined in the specification as including optical or electrical waves, is not statutory.

Allowable Subject Matter

6. Claims 1-10 are allowed. US Patent No 6794824 to Song et al discloses computing a metric for a current architecture over a predetermined period of time and comparing the computed metric to a metric of a prior architecture configuration. Prior art fails to disclose or suggest comparing the computed energy delay² product metric to an energy delay² product metric of a prior architecture configuration to determine an energy effectiveness of the current architecture configuration; and adjusting a number of active instruction schedulers of the current architecture configuration according to the energy effectiveness of the current architecture configuration.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Chung teaches using an energy delay² product metric for analysis of circuits.
- Mathew teaches using an energy delay² product metric to measure energy effectiveness in a high performance processor.
- Stan et al teach using an energy delay² product metric for architecture-level optimizations.
- Hsu et al teach the energy delay² product as a well-known energy metric that captures energy usage per operation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anand Patel whose telephone number is (571) 272-7211. The examiner can normally be reached on Mon-Fri 8AM-4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynne Browne can be reached on (571) 272-3670. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
